

# It's a hurricane warning.

## How prepared are you?

Learn how to reduce the potentially devastating effects of a hurricane with Affiliated FM's online training course *Preparing for Hurricanes*.

Severe damage from a hurricane can be prevented, or at least minimized, with an organized emergency response plan outlining precautions to take before, during and after the storm. In fact, Affiliated FM loss history indicates clients that implement our recommendations—including pre-planning and facility protection—experience, on average, one-eighth the wind loss at their facilities than those that do not.

It's free. It takes less than one hour to complete. And, it can be accessed 24 hours a day, seven days a week from any computer connected to the Internet! No downloads required!

*Preparing for Hurricanes* identifies key hurricane characteristics, explains critical procedures necessary to protect a facility against hurricane-force wind and driving rain, and identifies resources that can be used to prepare for an impending storm.

Geared toward plant managers and personnel responsible for protecting their facilities against hurricanes, the course can be incorporated into in-house training programs or used individually. There's no limit to the number of employees you can register. Best of all, managers can track the performance and progress of those taking the course!

To register for the course, visit <http://training.affiliatedfm.com>.
